DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on November 24, 2003 was considered by the examiner.

Allowable Subject Matter

Claims 1-7 are allowed. The following is an examiner's statement of reasons for allowance: The prior art does not disclose, teach or suggest the combination of features defined in claim 1.

For example, Amanuma et al. US 6,540,636 disclose a vehicle having an engine 3 to drive front wheels and a motor 5 to drive rear wheels, wherein the drive force of the motor 5 is transmitted to the wheels through a reduction unit 10 and a differential 20. The reduction unit 10 and differential 20 are accommodated in a casing 30 with an oil sump formed at the bottom of the casing for retaining lubricating oil. However, the claimed oil storage chambers, oil supply passages that deliver oil to the motor shaft, and the oil supply means driven by the motor are not disclosed.

Also, Nelson US 3,529,698 teaches the desirability of arranging a transmission oil retention and delivery system with two chambers 24 and 50 and two oil supply passages 42 and 43. However, Nelson does not suggest that the oil supply passages should supply the oil to a motor shaft or that an oil supply means driven by a motor should be provided. Thus, Nelson fails to cure the deficiencies of Amanuma et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Furutani, Nagano et al., Kuribayashi et al., Kitano et al., and Fukasaku et al. disclose front and rear wheel drive vehicle arrangements. Katayama et al., Yamaguchi et al., Sugano et al., Hasegawa, and JP 2002-200928 disclose cooling arrangements.
